Hiring Team

Berlin, BE, Germany

Working Student HR Services (m/f/d)

Dear Hiring Team,

After prompting more AIs, querying more messy databases, and automating more workflows than I'd like to admit, I've learned that real impact happens where product thinking, clean data, and smart technology meet. That is why I am excited to apply for the Working Student HR Services (m/f/d) role at BASF. With hands-on experience in quantitative analysis on complex datasets, SQL reporting, and intelligent workflow automation, combined with my Bachelor's in Digital Product Management and current Master's studies in International Business Management in Berlin, I am eager to help your team turn complex problems into scalable solutions.

In my current role as a Junior Project Manager (Working Student) at Auto1 Group in Berlin, I work embedded in a cross-functional product and operations environment across nine markets. Among my key contributions was scaling an AI voice bot across 9 markets (improving inbound answer rates from 65% to 85%) and structuring knowledge/vector databases for a chatbot handling 30,000+ monthly conversations. To empower our international teams, I built an AI Conversation QA & Evaluation platform, a real-time cross-country collaboration knowledge base, and an automated Price-Lead Offer Email tool using REST APIs and low-code automation.

On the analytical and technical side, I perform quantitative analysis on complex, disorganized datasets daily—using SQL in Redash, Advanced Excel, Looker Studio, and Tableau to build reliable company-wide KPI reporting. I am comfortable working with Git/GitHub, REST APIs, cloud platforms, low-code automation tools (such as Google Apps Script), and custom evaluation/vector databases. Working in an international Berlin environment has also strengthened my German (B1) alongside my fluent English and native Spanish.

What draws me most to BASF is the opportunity to contribute to a dynamic, product-driven team where quantitative rigor and practical builder execution make a tangible difference. Thank you for considering my application—I would welcome the opportunity to discuss how I can support BASF in this role.

Sincerely,

Guillermo Hernandez
