Working Student Spare Parts & Training Plan (m/w/d)

Dear Hiring Team,

I am writing to express my strong interest in the Working Student Spare Parts & Training Plan (m/w/d) role at GE Vernova. Through my experience helping scale conversational AI tools, optimizing operational workflows, and building data-driven internal products at Auto1 Group, I have learned that the greatest value comes from combining analytical rigor with practical builder execution. With a Bachelor's degree in Digital Product Management and my ongoing Master's studies in International Business Management in Berlin, I am eager to contribute this hands-on, problem-solving mindset to your team.

In my current role as a Junior Project Manager at Auto1 Group in Berlin, I work closely with product managers, developers, and regional operations leads across nine European markets. A core focus of my work has been conversational AI, where I supported the rollout and continuous tuning of our AI voice bot across 9 markets, routing millions of calls and increasing answer rates from 65% to 85%. I also manage the knowledge architecture and retrieval datasets for an AI chatbot handling over 30,000 monthly inquiries, and built an internal bulk-review QA platform to streamline how agents evaluate model quality.

Beyond day-to-day operations, I genuinely enjoy untangling disorganized datasets and creating solutions that make teams more efficient. In my analytics and reporting work, I frequently write SQL queries in Redash and build dashboards across Excel, Tableau, and Looker Studio so stakeholders have dependable, real-time metrics. When off-the-shelf software falls short, I roll up my sleeves to build lightweight internal tools, whether that means connecting internal systems through REST APIs, automating multi-step workflows, or testing and structuring custom evaluation data. Collaborating in an international Berlin environment has also allowed me to work comfortably across languages, using my native Spanish, fluent English, and working German (B1).

What particularly excites me about GE Vernova is the opportunity to bring this mix of analytical curiosity and builder execution to your team. Thank you very much for taking the time to review my application. I would welcome the chance to speak with you and discuss how my background can support GE Vernova in this role.

Sincerely,
Guillermo Hernandez
